

Bug/Error	Solution	Date
Leaderboard not centering	Issue with table inheriting an unnecessary margin. Fixed by redefining the margin for the leaderboard	16/03/2022
After the fetch request for the questions, useEffect is not assigning a single to useState 'question'.	Learned that useEffect() is asynchronous and the function that defines useState 'question' is being called before the fetch request is completed. I simply removed the function and added it to another useEffect, that acts once the fetch request and the useState 'questions' had been updated.	14/03/2022
Mongodb was not performing a 'sample' request to pull random records from the db.	Although not an optimal solution, it works. I simply pulled the whole database and performed the sample function on the server. Needs to be rectified, due to scaling issues, but allows production to continue.	13/03/2022
Summary page not loading when a user gets scores of only 0.	All scores were required to load the summary page, but due to JS not updating the useState of scores due the answer always being 0 it meant the page wouldn't load. We amended the useState so it added the values regardless of its previous value.	16/03/2022
Accuracy bar not rendering the fill.	When updating the naming of the parameters and props one step in the hierarchy was missed meaning an incorrectly named prop was being passed down. Once discovered it was rectified and the bar's fill would render as expected	15/03/2022
